### **DETAILED ACTION**

### Claim R j ctions - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1, 7 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Edmonds 5,280,426.

Regarding to claimed invention, Edmonds teaches network type game participation comprising:

a game which is conducted at a specific location is distributed in real time over a transmission line via a server (such as central control unit communicates with agent control units geographically located in the region where the game of chance to be participated in is played. Communication between the central control unit and player control unit is isolated from the agent control unit, abstract lines 4-7);

a person who desires to participate in the game receives the game via a terminal device (such as An agent located on-site where the game of chance is to be played purchases, holds and collects units of participation ordered by the central control unit, see abstract, lines 9-14); and

the person participates in the game which is conducted at the specific location by

Art Unit: 2142

conversing with the server via the transmission line (such as Selected game play data is transmitted between the central control unit and the agent control unit, see abstract lines 9-11).

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 7 and 10 are rejected under 35 U.S.C. 102(e) as being anticipated by Kim al 6,785,561.

Regarding claimed invention, Kim clearly teaches network participating game including game data originated from base station through an RF transmitting/receiving section 60, (such as for claimed game which is conducted at specific location is distributed in real time over transmission line);

A network game function implemented in a portable telephone whereby a network game is performed, where the step is performed by designating portable telephones to perform the network game, and the network game is programmed in accordance with key signals inputted by a user, see col. 1, lines 56-65;

Transmitting game data corresponding to the inputted key signals for the network game, see col. 1, lines 65- col. 2, lines 1-4.

Regarding claim 2, for claiming game distributed in real time includes moving image data, Kim teaches

Application/Control Number: 09/982,743

Art Unit: 2142

## Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kim in view of Chen et al as in 09/063,295 (US 2002/0122137).

Regarding to claimed invention Kim teaches participating in real time network game over telephones, however does not disclose the game data that includes moving image. Chen et al teaches television companion device and communication link between the television and the TCD for providing information streams of interest to general viewing audience, the information stream includes video i.e., moving images of soccer game, see col. 2, paragraph 28. It would haven obvious to one of the ordinary skill in the art at the time of invention to combine the teaching of Kim with Chen, because Chen would provide network game on television. It is obvious to ordinary skill in the art that, today as television merges with other devices such as personal computers, a computer network or other video type device, the output signals can include video, audio and data.

### Allowable Subject Matter

6. Claims 3-6,8-9 and 11-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
